

How many white dogs are there in the video?

I need to find out the number of white dogs in the video. I can use the 'query_object_memory' tool to get this information.

Action: query_object_memory
Action Input: How many white dogs are there in the video?

Results: There is one white dog in the video.

I now know the final answer.
Final Answer: There is one white dog in the video.

How many white dogs are there in the video?

I need to find the object_id of the white dogs in the video. I can first try to query the database for objects with the category 'white dog'.

Action: query_database
Action Input: SELECT object_id FROM Objects WHERE category = 'white dog'

Results: []

There are no objects with the category 'white dog' in the database. I should try to use the 'open_vocabulary_retrieval' tool with the description 'white dog'.

Action: open_vocabulary_retrieval
Action Input: 'white dog'

Results: [1]

The object with id 1 corresponds to a white dog.
Final Answer: There is one white dog in the video.
